FINAL NOTICE OF PUBLIC REVIEW
Floodplain Management (Executive Order (EO) 11988)

The City of Biloxi is reviewing the project shown below to determine whether assistance should be granted therein.

East Biloxi East-West Neighborhood Access Road Phase II - This public transportation project is to construct a continuous east-west access road adjacent to the northern boundary of the CSX railroad from Gill Avenue east to Graham Avenue and Iroquois Street east to Hopkins Boulevard. The proposed east-west access road construction right-of-way will be approximately 60 feet in width along the entire length of the project corridor. It will impact a total of 1.69 acres, a majority of the area is currently paved or vacant land.

Since this project is partially located in a base (i.e. 100 - year frequency) floodplain established by the Federal Emergency Management Agency (FEMA), HUD is required by Presidential directive EO 11988 not to support the projects if there are practicable alternatives to developing it in the base floodplain. Accordingly, an analysis will be prepared. Comments from the public are invited and will be received for seven (7) days from this publication by the City of Biloxi, Engineering Department, Federal Programs Manager, P. O. Box 429 (39533), 214-A Delauney Street, Biloxi, MS 39530.
