## Shoreline Impact Outlook

This map delineates the first potential shoreline impacts beginning Friday, April 30th until Monday, May 3rd. If winds are as forecast\*, shoreline impacts may occur as early as Friday afternoon. Shoreline impacts beyond Monday cannot be forecast at this time. Daily trajectory estimates provide a more accurate 72 hour forecast.

\* This forecast is based on the NWS long term outlook from Tuesday, April 27th, which calls for strong winds from the SE for the end of this week and over the weekend. Forecasts that far in the future are highly uncertain.
